

The best way to get into crypto

Send tokens effortlessly from one network to another,
without the need to connect your wallet direct.

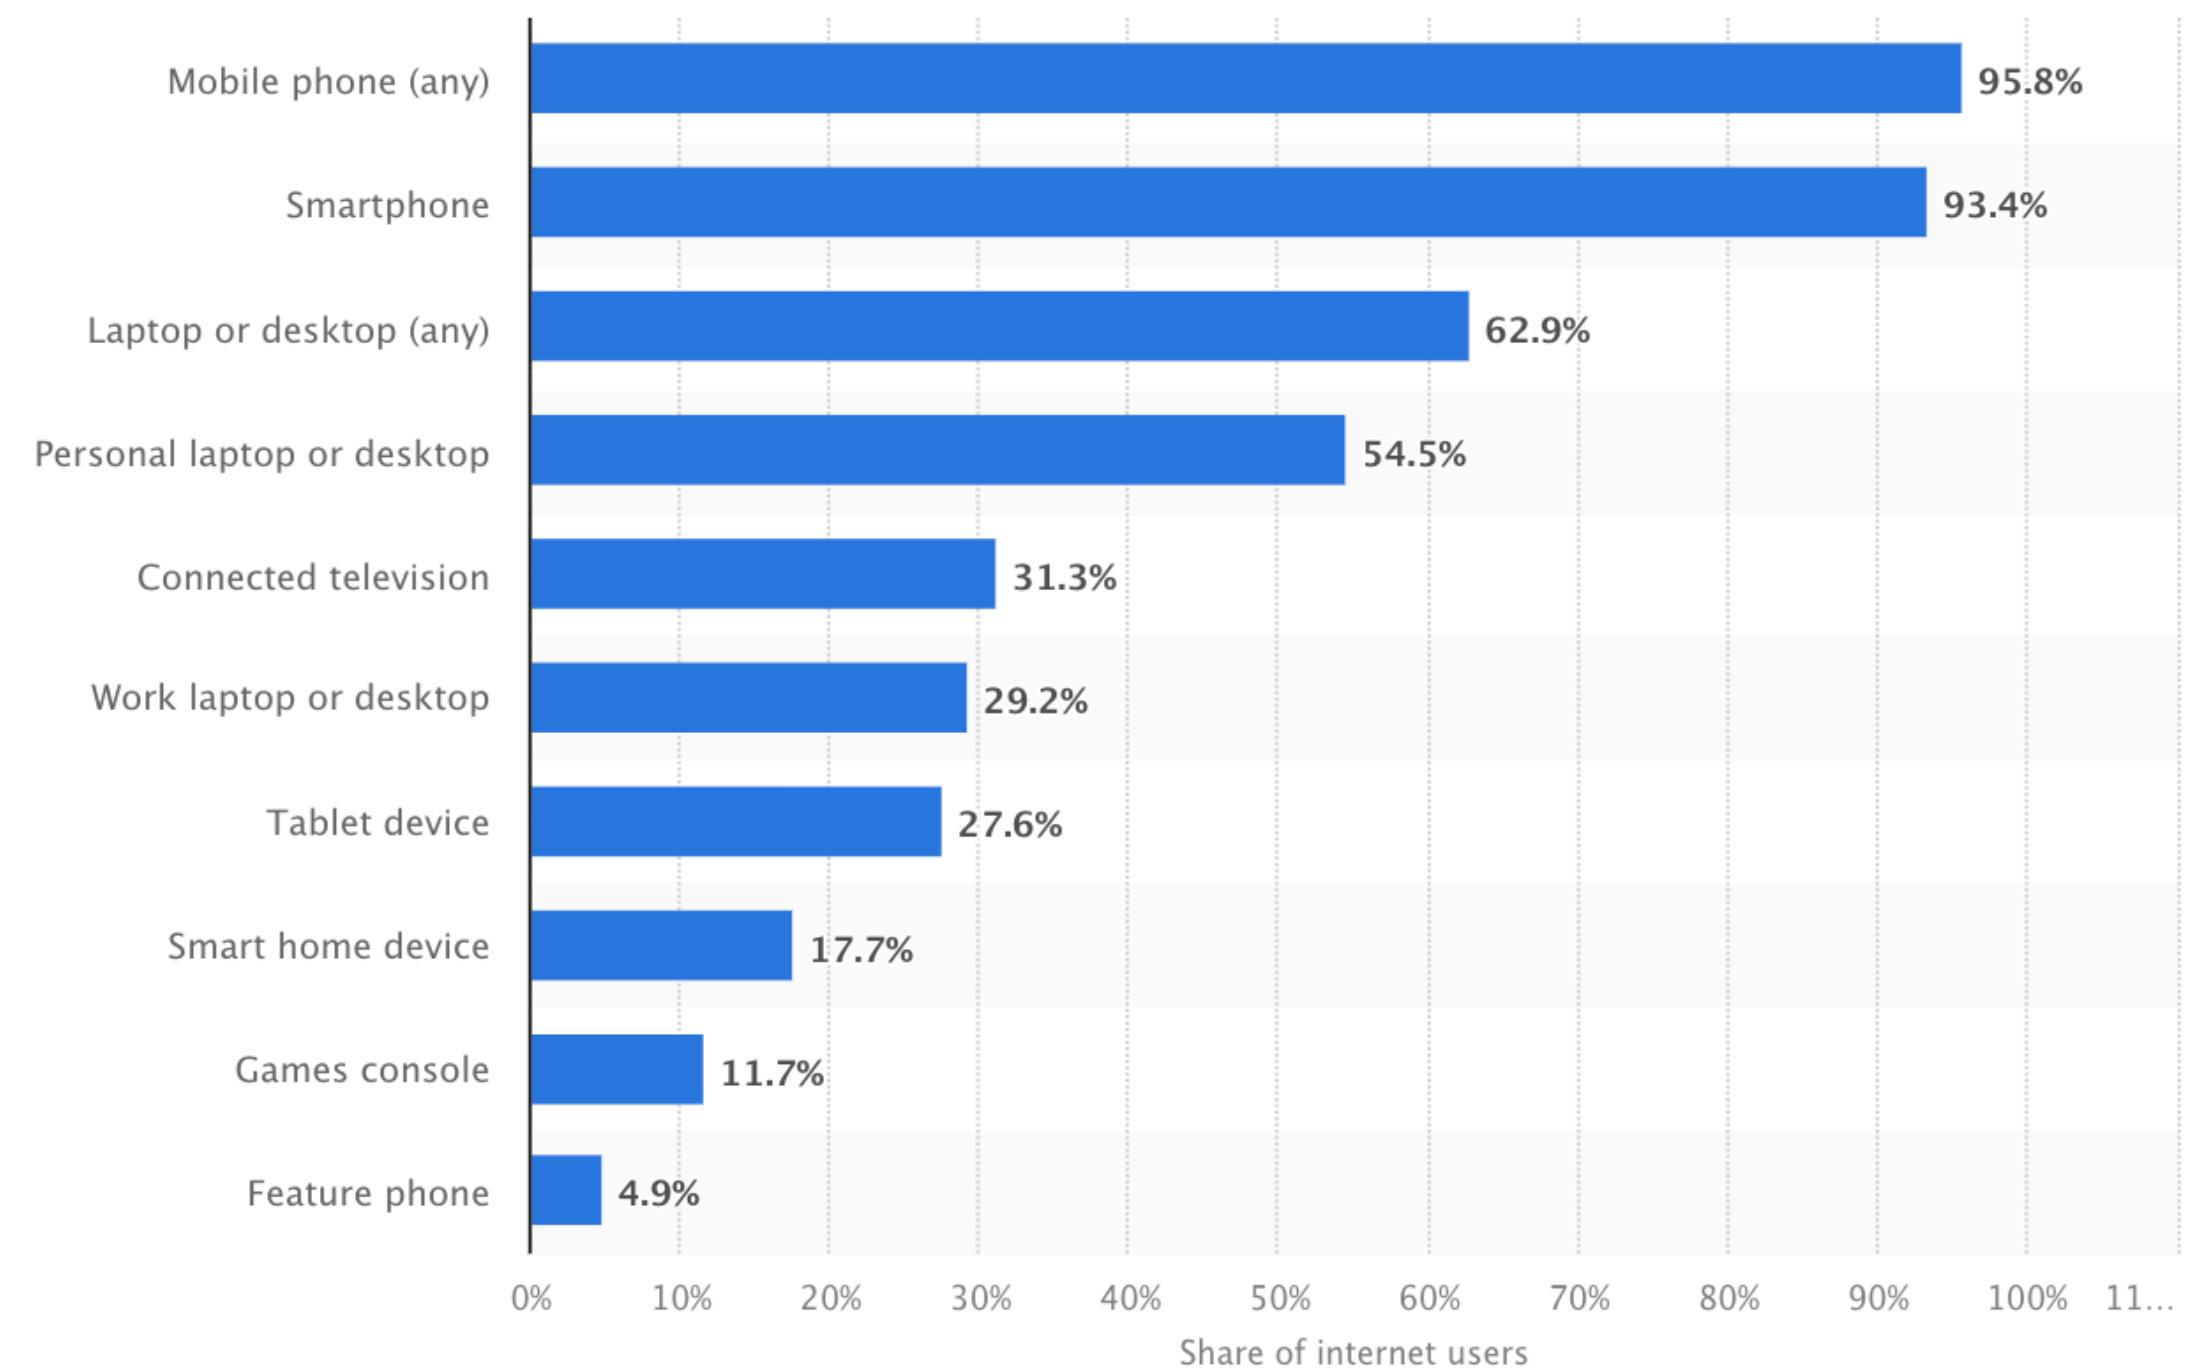

Exchange now

Web3 Smart Contract Loss Amount by Attack Types, 2022.

Vulnerability exploits saw the highest frequency and loss amount throughout the year. For the year 2022, \$1,458 million was lost from vulnerability exploits in 87 attacks.

Web3 Security Loss Amount by Attack Types, 2022.

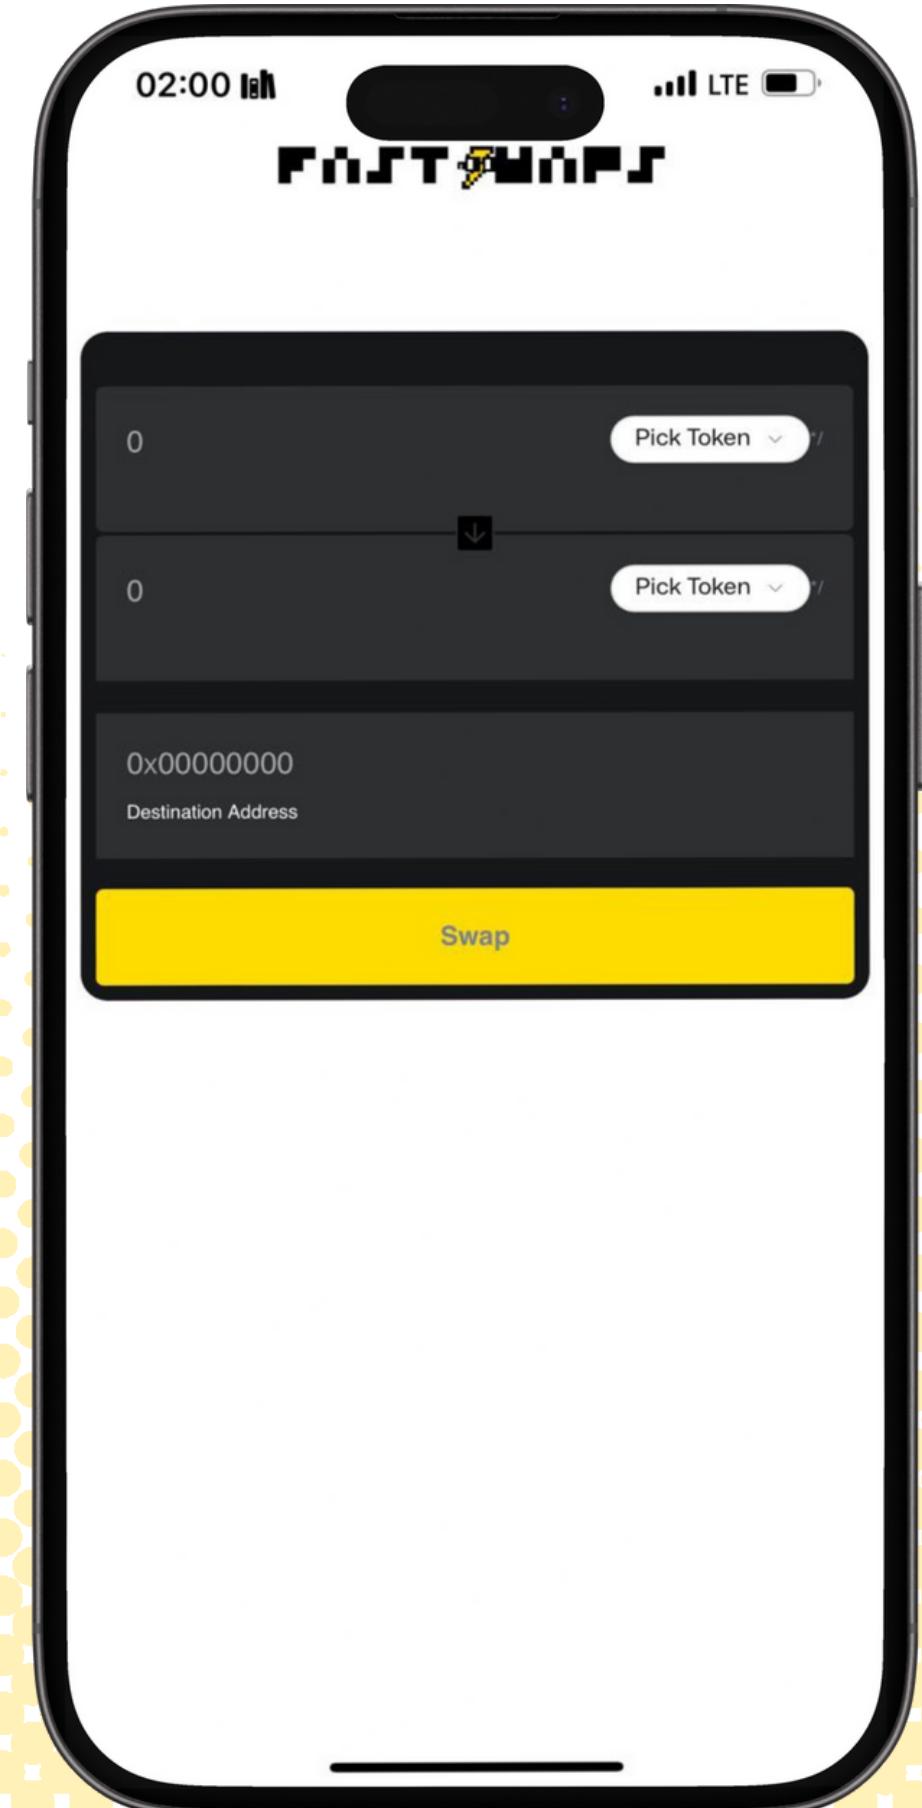

Problem

How can we onboard more users through the Ethereum ecosystem, without the need for KYC, without exposing them to security risks while allowing easy accessibility to any device?

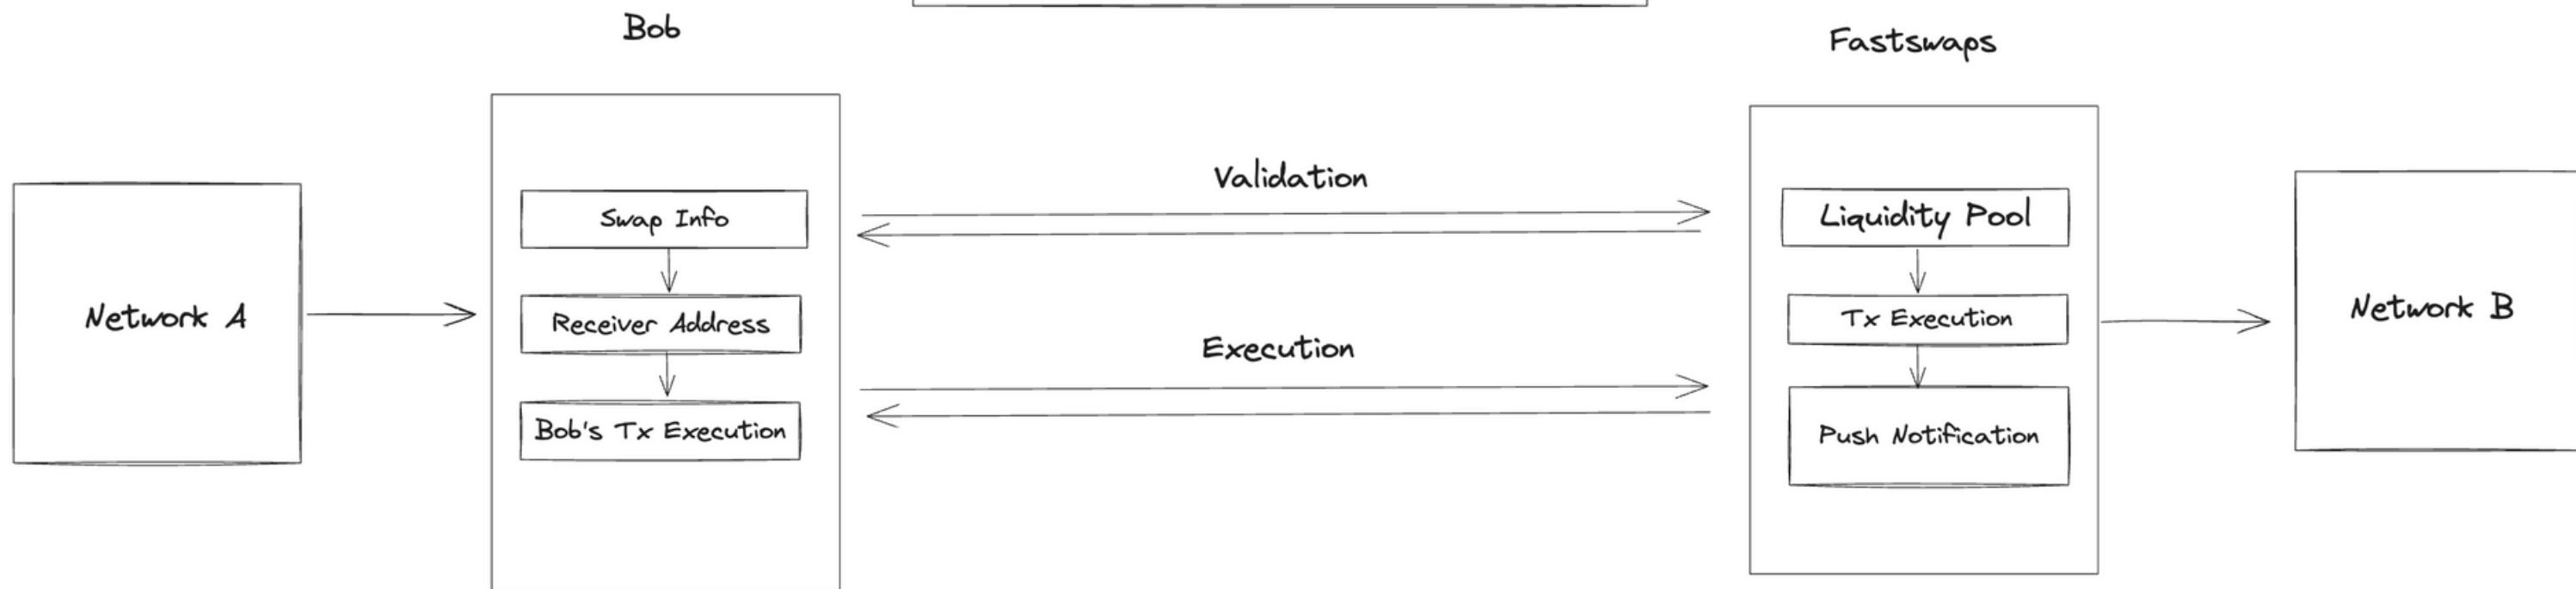

First mobile cross-chain exchange

Our platform empowers users to send tokens effortlessly from one network to another, all within the familiar environment your phone, eliminating the need to connect your wallet directly.

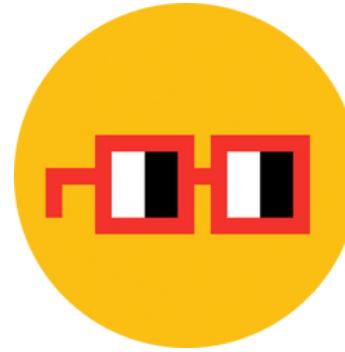

Cross-chain bridge

FastSwaps

NEAR (BOS)

NOUNS

COW PROTOCOL

UNISWAP V4

CELO

Current

Send tokens effortlessly from one network to another, without the need to connect your wallet direct and without no KYC.

Working Plan

- Decentralized the current watcher and pools
- Add more tokens and networks
- Build a Telegram in app pop-up integration

Vision

To make crypto more accessible and inclusive, simplifying the complexities associated with cross-chain transactions.

Thank you!
